

Figure 7: Respondents' reaction to the statement "I am worried that misogynistic and hostile beliefs espoused by extremist groups result in violence towards women."

During the COVID-19 pandemic, 70% of respondents agreed that online radicalization and the proliferation of extremist propaganda had increased. Altogether, 76.9% and 92.9% of women agreed with the statement.

One interviewee from Indonesia noted that:

"COVID has managed to restrict direct meetings to disseminate propaganda, misinformation and disinformation through most government's large-scale restrictions to prevent the virus' spread. However, the tendency to utilize online space to disseminate these has increased since the use of online activities is mandatory in various sectors, such as working and education. Most people certainly use online platforms to disseminate false information

regarding the outbreak, as well as radical ideas targeted at people, including recruiting them as a part of groups."

Figure 8: Respondents' view to the statement, "Online radicalization and the proliferation of extremist propaganda has increased during COVID-1".

Another interviewee from Indonesia observed that:

"(Based on my experience), during 2020-2021 one of the interesting things has been the impact of misinformation and disinformation related to COVID, affecting people's views and attitudes in responding to, preventing and handling of (the virus). At the beginning of the Indonesian government's policy on limiting religious activities in places of worship, this issue caused a strong, adverse reaction among extremist groups, giving rise to a narrative that the
