

HOW CAN YOU HELP?

As a boater:

- Check tidal conditions beforehand
- Stay within marked channels
- Pay attention to buoys and markers
- Do not run aground
- If you run aground, call for help
- Wear polarized sunglasses
- Take a safe boating course

As a developer:

- Do careful mapping of seagrass in potential areas for development
- Avoid dredging and filling
- Learn about existing regulations

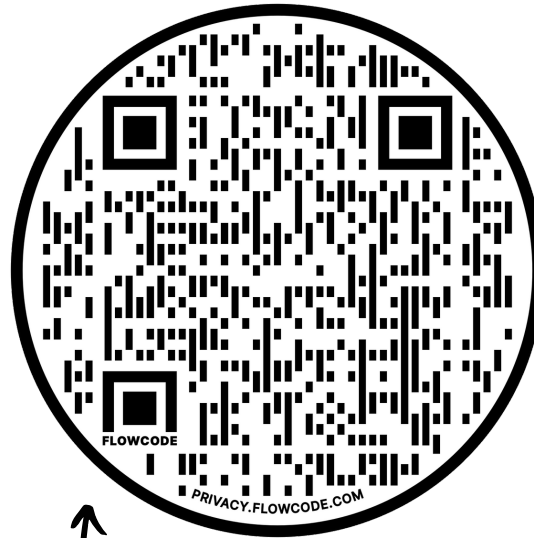

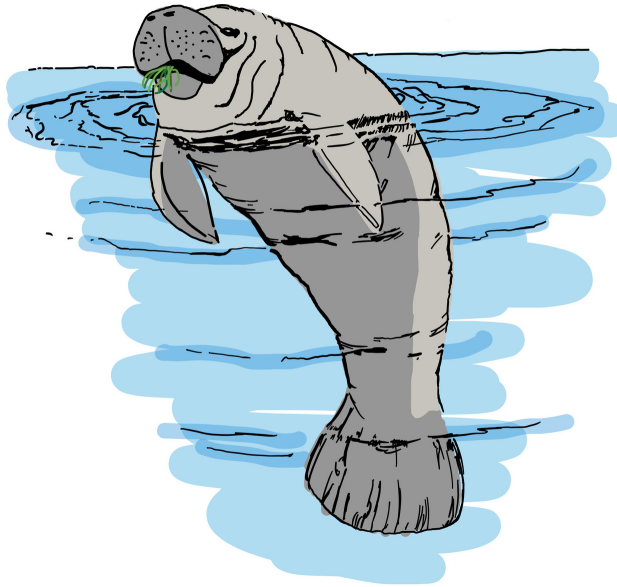

As a homeowner:

- Diminish fertilizer use (use soaking, rain gardens, and native plants instead)
- Dispose of pet waste properly
- Keep seagrass in mind during construction (for example, build high docks with grating instead of planks)

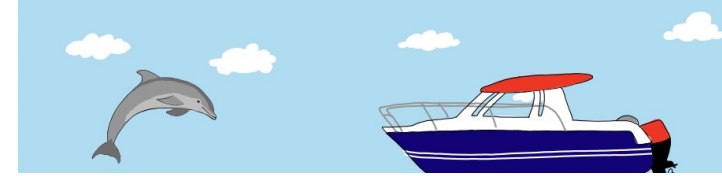

As anyone who wants to help:

- Urge politicians to establish stricter water quality regulations
- Mobilize to give seagrass an 'endangered' status
- Follow established laws for seagrass protection
- Reach out to environmental organizations and volunteer in restoration projects
- Challenge the misconception that seagrass is 'ugly' and 'useless'
- Tell your friends and family about the importance of this ecosystem
