

## SS Pack allows businesses to access further data more rapidly

The SS Pack can reduce the information acquisition time by returning all the information that matches the user's search intent.

The performance optimized for individual search systems is maintained by automatic updates of real-time search log records, augmented by Upstage's technological know-how.

1.8X <sup>↑</sup><sup>1</sup>

### Higher Return of Information

Unlike existing search systems that only return information limited to the entered search keywords, SS Pack returns all relevant data that meet the user's search intent

### Optimal Attempt

#### Reduced Information Acquisition Time

By returning all semantic-based information of the search keywords, the time required for information acquisition is reduced drastically compared to that of traditional keyword-matching search systems

SOTA <sup>2</sup>

### Cutting-Edge Technology

The analysis of user logs saved in real-time allows us to further optimize the individual search services over time

<sup>1</sup> Evaluated against 100 internal test queries. Comparison of the amount of information returned with at least one keyword included in the search term and the amount of returned information against that of SS Pack

<sup>2</sup> State-of-the-art, current highest level of results and performance
